

Code Cleanup Audit

punta-cana-photo-edition · src/ and functions/ · 21 August 2026 · branch main @ 71lead4c

201 FILES SCANNED	51 UNREACHABLE	5,287 DEAD LOC	171 KB RECOVERABLE	13 EMPTY FOLDERS
----------------------	-------------------	-------------------	-----------------------	---------------------

Nothing has been deleted or modified. This is a review list only.

How this was produced. I built an import graph of every .js/.jsx file in src/ and functions/, then walked outward from the real entry points Gatsby uses: src/pages/**, the templates registered in gatsby-node.js (blog.js, package.js), functions/**, and the gatsby-*.js config files. Anything the walk never reaches is listed below. Every entry was then re-checked by hand for dynamic references (string paths, GraphQL field names, StaticImage sources) before being called dead.

Read this before deleting anything

Two things this analysis *cannot* see, so confirm them yourself:

- **Netlify Functions are public HTTP endpoints.** A function with no caller in this repo can still be called by an external form, a webhook, or a stale browser tab. See §4.
- **Nothing here has been build-verified.** The safe order is: delete one cluster → npm run build → confirm the affected pages render → commit. One cluster per commit makes any mistake a one-line revert.

1. Dead clusters — no path from any entry point

Grouped by feature. A "cluster" is a group that only imports *each other* — the whole island is unreachable, so it comes out together. Deleting a cluster partially is what breaks builds; delete the whole box or none of it.

Wedding Questionnaire — entire feature, no page or route references it	10 files · 2,386 LOC	
src/components/WeddingQuestionnaireComponents/StyleAestheticSection.js	561	2025-05-29
src/components/WeddingQuestionnaireComponents/WeddingQuestionnaire.js	381	2025-05-29
src/components/WeddingQuestionnaireComponents/BudgetSection.js	309	2025-05-29
src/components/WeddingQuestionnaireComponents/FinalDetailsSection.js	279	2025-05-29
src/components/WeddingQuestionnaireComponents/WeddingDetailsSection.js	243	2025-05-24
src/components/WeddingQuestionnaireComponents/ExperiencesSection.js	223	2025-05-29
src/components/WeddingQuestionnaireComponents/PersonalInfoSection.js	167	2025-05-24
src/components/WeddingQuestionnaireComponents/WeddingQuestaionnaireForm.js	115	2025-05-29
src/components/ContentfulSvg/ContentfulSvg.js	69	2025-05-24
src/hooks/WeddingQuestaionnaireValidation.js	39	2025-05-29

Added May 2025 ("added wedding questionnaire to navbar and footer"), but the navbar and footer links are gone and no page imports it. The Netlify form name weddingQuestionnaireForm dies with it — check the Netlify dashboard for stored submissions before deleting.

Wedding Package Card — superseded by the live weddingPackages flow		5 files · 426 LOC	
src/components/PackageComponents/WeddingPackageCard.js	114	2025-11-25	
src/components/PackageComponents/ContactInfo.js	104	2026-08-18	RECENT
src/components/PackageComponents/ContactForm.js	93	2025-06-10	
src/components/PackageComponents/WeddingPackageForm.js	78	2026-08-18	RECENT
src/components/ImageCarousel/ItemCardSwiper.js	37	2026-08-18	RECENT
Three of these were edited on 18 Aug 2026 yet are still unreachable — likely leftovers from the wedding-planner work. Worth a glance before deleting in case something was meant to be wired up and never was. The live contact form is src/components/ContactForm/Form.js, a different file.			
Blog category pages — removed with the old blog library		3 files · 176 LOC	
src/template/blogCategory.js	103	2026-03-13	
src/components/BlogComponents/HeroBlogCategoryComponent.js	44	2025-07-18	
src/components/BlogComponents/PostList.js	29	2026-08-15	
Confirmed by the comment in gatsby-node.js:110: "Old category pages were removed with the previous blog library... empty/thin category pages are not rebuilt." The createPage call that used this template is commented out at lines 115–127 — that dead block can go with it. src/components/BlogComponents/BlogCategory.js (52 LOC, listed in §2) belongs to this same retirement.			
ContentBlock family — five variants, none reachable		5 files · 273 LOC	
src/components/ContentBlockComponent/ReversedContentBlock.js	78	2026-08-18	RECENT
src/components/ContentBlockComponent/ContentBlockLocal.js	74	2026-08-18	RECENT
src/components/ContentBlockComponent/ContentBlock.js	72	2026-08-18	RECENT
src/components/ContentBlockComponent/ContentBlockVideo.js	41	2024-10-31	
src/components/ContentBlockComponent/ContentBlockPhotoShoots.js	8	2024-10-23	
The whole ContentBlockComponent/ folder is unreachable. Three were touched on 18 Aug 2026 — same pattern as the package cards above, so confirm the wedding-planner pages aren't meant to use them.			
Services / Company info — duplicate ServiceCard pair, both dead		6 files · 170 LOC	
src/components/ServicesComponents/ServiceCardLocal.js	48	2025-11-25	
src/components/ServicesComponents/ServiceCard.js	39	2025-06-09	
src/components/ServicesComponents/OurServices.js	24	2026-03-13	
src/components/CompanyInformationComponent/CompanyInformationComponent.js	85	2025-05-23	
src/components/CompanyInformationComponent/WhyChooseUs.js	37	2025-05-17	
src/components/CompanyInformationComponent/ServiceCard.js	22	2025-06-09	

Packages (duplicate set) — live copies live in PackageComponents/		4 files · 239 LOC	
src/components/OurPackages/WeddingPlannerPackageCard.js	69	2026-07-16	
src/components/OurPackages/OurPackages.js	30	2026-03-13	
src/components/PackageComponents/PackageCardLocal.js	116	2026-08-18	RECENT
src/components/PackageComponents/OurPackagesLocal.js	24	2025-06-14	
src/pages/proposal/index.js imports PackageComponents/OurPackages — a <i>different</i> file from OurPackages/OurPackages.js. Easy to confuse; check the import path, not the filename.			
Photo grid — whole folder unreachable		3 files · 321 LOC	
src/components/PhotoGridComponent/PhotoGallery.js	121	2025-07-18	
src/components/PhotoGridComponent/PhotoGrid.js	100	2026-08-18	RECENT
src/components/PhotoGridComponent/PhotoGridLocal.js	100	2026-08-18	RECENT
Verified against a false positive: four pages mention "PhotoGallery", but every one is the GraphQL field allContentfulPhotoGallery — not this component. The live grid is BlogComponents/PhotoGrid.js.			

2. Standalone dead files

Each is unreachable on its own and imports nothing else that is dead.

FILE	LOC	LAST TOUCHED	NOTE
src/components/PackageForm/Button.js	244	2024-11-08	Largest single dead file
src/emails/TesteventRentalEmail.jsx	166	2025-03-30	Test copy of the live eventRentalEmail.jsx
src/components/BackgroundVideoComponents/BackgroundVideo.js	150	2026-03-13	
src/hooks/useImageProtection.js	121	2026-02-14	Zero references; image protection is inline elsewhere
src/components/HeroSwiper/HeroSwiperLocal.js	97	2026-08-18	RECENT HeroSwiper.js is the live one
src/components/HeroSwiper/HeroSwiperWeddingPuntaCana.js	94	2025-05-23	Page now redirects to /puntacana-wedding-planner/
src/components/HeroComponent/HeroComponent.js	70	2024-09-25	Live copy is BlogComponents/HeroComponent.js
src/components/BlogComponents/BlogCategory.js	52	2025-11-25	Part of the blog-category retirement (§1)
src/components/PackageComponents/Form.js	42	2025-04-05	Live form is ContactForm/Form.js
src/components/VideoCardsComponent/VideoCard.js	39	2024-11-08	
src/components/WorkedWithComponent/WorkedWith.js	34	2025-11-25	
src/components/QuoteComponent/QuoteComponent.js	33	2025-11-25	
src/components/FloatingButtonComponents/MessengerButton.js	32	2025-03-25	Layout uses ExpandableMessengerButton
src/components/VideoCardsComponent/VideoCards.js	15	2024-11-01	
src/data/schema.js	22	2026-08-15	See §3 — edited recently, wired to nothing

3. Worth a decision, not just a delete

src/data/schema.js — possibly a bug, not dead code

This exports an Organization JSON-LD block (name, logo, phone, address, sameAs) and was **edited on 15 Aug 2026** — yet nothing imports it. The live SEO helpers are the six files in src/Utils/*Seo.js. So either someone updated organization schema that never reaches the site (an SEO loss worth fixing), or it was superseded and should go. Decide which before deleting — this is the one item on the list where deletion might be the wrong call.

Recently-edited but unreachable — 9 files

Nine files were modified on 18 Aug 2026 (three days before this audit) but are still unreachable: the three ContentBlock variants, PhotoGrid.js and PhotoGridLocal.js, PackageCardLocal.js, ContactInfo.js, WeddingPackageForm.js, and ItemCardSwiper.js. That pattern usually means one of two things: work-in-progress that was never hooked up, or components that were edited by find-and-replace across the folder without noticing they were already orphaned. Check these against your intent for the wedding-planner pages before deleting.

4. Netlify Functions

FUNCTION	CALLED FROM	VERDICT
functions/sendQuoteEmail.js	PDFQuoteGenerator.js, RentalPDFQuoteGenerator.js	Live — keep
functions/sendContractEmail.js	PDFContractGenerator.js, RentalPDFContractGenerator.js	Live — keep
functions/elopementRequest.js	nothing in this repo	Keep anyway — see below
functions/rentalItems.js	nothing in this repo	Your call — see below

elopementRequest.js — do not delete

It has no caller, but that is deliberate. Commit 47d631a (15 Aug 2026) stripped it to a no-op stub with the message: *"Keep Netlify Forms as the single email delivery path and make the legacy endpoint return success for already-open page versions."* It exists so visitors with a stale tab open — still running the old JS bundle — get a success response instead of an error. Delete it only once you accept that those stale sessions will start failing. The elopement form itself now posts through Netlify Forms (ElopementExperience.js:978, data-netlify="true").

rentalItems.js — likely dead, but verify externally

Last touched 30 Mar 2025 as part of an "email send after event rental cart" feature. No page posts to /.netlify/functions/rentalItems, and the cart flow it served is gone. It is the *only* consumer of src/emails/eventRentalEmail.jsx — so if this function goes, that email template goes with it (and the @react-email/render dependency may become unused). Before deleting, check the Netlify dashboard's function invocation log for recent hits; that is the only way to rule out an external caller.

5. Folders that empty out completely

If every dead file in §1–§2 is removed, these 13 directories are left with nothing in them and can be removed too. `src/api/` is *already* empty today – it has been since March 2025.

DIRECTORY	FILES	DIRECTORY	FILES
<code>src/api/</code> (<i>already empty</i>)	0	<code>src/components/OurPackages/</code>	2
<code>src/components/WeddingQuestionnaireComponents/</code>	8	<code>src/components/VideoCardsComponent/</code>	2
<code>src/components/ContentBlockComponent/</code>	5	<code>src/components/QuoteComponent/</code>	1
<code>src/components/CompanyInformationComponent/</code>	3	<code>src/components/WorkedWithComponent/</code>	1
<code>src/components/ServicesComponents/</code>	3	<code>src/components/BackgroundVideoComponents/</code>	1
<code>src/components/PhotoGridComponent/</code>	3	<code>src/components/HeroComponent/</code>	1
<code>src/components/ContentfulSvg/</code>	1	<code>src/components/ImageCarousel/</code>	1

6. Checked and confirmed LIVE – do not remove

These 17 files look orphaned to any import-based tool, because nothing imports them. I verified each one individually and they are all genuinely in use. Listing them so nobody re-flags them later.

FILES	WHY THEY LOOK DEAD	HOW THEY ARE ACTUALLY LOADED
<code>src/images/gender-reveal/</code> (8 <code>.webp</code>)	No import statement	<code><StaticImage src="..." /></code> string props in <code>GenderRevealExperience.js</code>
<code>src/images/wedding-planner/</code> (5 <code>.webp</code>)	No import statement	Referenced by <code>WeddingPlannerExperience.js</code>
<code>src/images/signature.png</code>	No import statement	<code>StaticImage</code> in <code>Layout/Footer/Signature.js</code>
<code>src/images/favicon.png</code>	No import statement	<code>gatsby-config.js:131</code> (manifest icon) + <code>gatsby-node.js:192</code>
<code>src/locales/en-US/index.json</code> <code>src/locales/es/index.json</code>	No import statement	Read from disk by <code>gatsby-source-filesystem</code> + <code>gatsby-plugin-react-i18next</code>

7. Duplicate filenames – the root cause

Eight filenames exist in more than one folder, and in most cases one copy is live while the other is dead. This is what makes the codebase hard to navigate and why a "Local" suffix keeps reappearing. Worth settling on one home per component after the cleanup.

FILENAME	LIVE COPY	DEAD COPY
<code>OurPackages.js</code>	<code>PackageComponents/</code>	<code>OurPackages/</code>
<code>Form.js</code>	<code>ContactForm/</code>	<code>PackageComponents/</code>
<code>ContactInfo.js</code>	<code>ContactForm/</code>	<code>PackageComponents/</code>
<code>HeroComponent.js</code>	<code>BlogComponents/</code>	<code>HeroComponent/</code>

PhotoGrid.js	BlogComponents/	PhotoGridComponent/
ServiceCard.js	– <i>both dead</i>	ServicesComponents/ + CompanyInformationComponent/
TextComponent.js	RichTextComponents/ + TextComponent/	– <i>both live</i>
index.js	expected – one per page route	

8. Suggested order

1. **Decide on `src/data/schema.js`** (§3) – wire it up or drop it. Do this first; it may be a live SEO bug.
2. **Review the nine 18-Aug files** (§3) – confirm they are abandoned, not unfinished.
3. **Delete the unambiguous clusters** – Wedding Questionnaire, blog category, ContentBlock, Services/Company info, VideoCards, WorkedWith, QuoteComponent, BackgroundVideo. Build after each.
4. **Delete the duplicate-copy files** (§7) – slower, since these need the import path checked, not the filename.
5. **Remove the emptied folders** (§5), including the already-empty `src/api/`.
6. **Resolve the two functions** (§4) – keep `elopementRequest.js`; check Netlify logs for `rentalItems.js`.
7. **Then re-run an import check** – removing clusters can orphan further files that were only reachable through them.

Static import-graph analysis of 201 files across `src/` and `functions/`, manually verified for dynamic references. No files were modified. Figures exclude `node_modules/`, `.cache/` and `public/`.
